

Private Environmental Regimes in Developing Countries

Globally Sown, Locally Grown

Ralph H. Espach

This book assesses the recent growth and future prospects of private transnational environmental certification and standards regimes. Regimes of this type have proliferated in the last 20 years as businesses and environmental groups have sought to replace, or improve upon, traditional inter-governmental conventions and treaties. Recent theory and research suggest that these regimes transfer the environmental standards and norms of West Europe and North America outward, via trade and investment, to developing states worldwide. This book challenges this literature and examines in detail to what degree, and under what circumstances do these transnational regimes truly influence industrial environmental practices in developing countries.

"Under what conditions do market-driven environmental protection regimes actually work? In this illuminating and much-needed study, Espach identifies the reasons why forest and chemicals certification initiatives took hold in Brazil but failed to flourish in Argentina. Based on extensive research, this book makes a critical contribution to the field of global environmental politics, and draws conclusions that no scholar, activist, or policy-maker should ignore."--Kate O'Neill, University of California at Berkeley

"This book is an outstanding comparative study of the effectiveness of global voluntary programs in forestry and chemical industries. Its carefully executed case studies demonstrate the important role of domestic industrial and environmental policies in shaping the local effectiveness of these programs. Highly recommended."--Aseem Prakash, University of Washington-Seattle

"An impressive historical and comparative effort that significantly enhances our knowledge of private authority in general and forest certification in particular. Espach marries thorough empirical research with superior analytical skills--the result is a greatly expanded understanding of private authority in developing countries."-- Ben Cashore, Professor of Environmental Governance & Political Science, and Director, Program on Forest Policy and Governance School of Forestry and Environmental Studies, Yale University

Ralph Espach is an analyst at CNA, a nonprofit research and development center in Alexandria, Virginia.
